RENSA FILTRATION ANNOUNCES ACQUISITION OF D-MARK, INC.*Rensa Filtration growth continues with fourth acquisition in the last 15 months*

CHICAGO, ILLINOIS – October 22, 2018 – Rensa Filtration, a family of filtration companies that manufactures innovative air filtration products, acquired Michigan-based, D-Mark, Inc. D-Mark is a leading manufacturer of molecular filtration products and proprietary owner of CarbonWeb® media and OdorGuard® products used in a variety of odor, gas & particulate removal applications.

Since the company's founding in 1970, D-Mark has supplied many industries with activated carbon filters. The CarbonWeb® process allows the capability to produce a wide variety of carbon loadings, with pressure drops low enough to allow usage in commercial, industrial and residential air handling systems. The patented product and process is used in OEM products for appliances, air cleaning and special HVAC applications. D-Mark's products include: panels, pads, pleats, pleat inserts, rigid cells, ring panels, CarbonWeb roll media, "Filled" filters for V-Banks, bulk carbon and other filters for appliances and air cleaners.

"D-Mark's ability to manufacture nonwoven carbon filled filter media is exciting and allows us to continue to expand the innovative product portfolio of Rensa Filtration," noted Brandon Ost, CEO of Rensa Filtration. "D-Mark founder and President, James Kasmark, has built an exceptional company with a reputation for advancing carbon technology to address customer needs with molecular filtration."

“I knew that when it was time for me to sell my company I wanted the new owners to have a passion for filtration. I have known Brandon for many years and it is an excellent fit,” said Mr. Kasmak. “Combining the patented CarbonWeb process and technology with Rensa’s energy and spirit for innovation, along with a proven track record of the management team to introduce new products to the filtration market provides D-Mark the tools necessary to reach new levels.”

D-Mark is Rensa’s fourth acquisition since its inception in 2017. Previous acquisitions include, Maryland-based Viskon-Aire®, Illinois-based Permatron® as well as Michigan and Ohio-based RoboVent®. Rensa will continue to look to grow through acquisitions.
