**Rensa Filtration Announces Two Acquisitions:
APC Filtration and R.P. Fedder**

AURORA, IL – Sept 6, 2023 – Rensa Filtration, a manufacturer of consumable, mission-critical air filtration products, announced today that it recently completed two strategic acquisitions: APC Filtration, in Ontario, Canada, and R.P. Fedder in Rochester, NY.

“Both APC and R.P. Fedder bring decades of experience and complementary capabilities to our high efficiency air filtration business,” said Brandon Ost, CEO and Founder of Rensa Filtration. “We plan to operate APC and R.P. Fedder together with our Custom Filter business, creating a bigger and more capable business that will serve our customers with mission-critical high efficiency air filtration products.” The combined division will be led by Matt Fortuna, a filtration industry veteran who joined Rensa in June to lead Custom Filter.

“I am pleased that Russ and Tammy Kelly, founders and owners of APC, and Chris Fox, the owner of R.P. Fedder, decided to partner with Rensa. APC brings nearly 30 years of filtration experience and complementary filter production and testing capabilities,” Ost continued. “R.P. Fedder is a well-known filter business with a 60+ year history engineering and distributing filters and filtration equipment for education, healthcare and high-tech manufacturing facilities in Upstate New York. R.P. Fedder also engineers and manufactures customized air filters for global OEMs. We

welcome Russ and Tammy and the APC team and Chris and the R.P. Fedder employees to Custom Filter and Rensa.”

About Rensa Filtration

Rensa is a leading manufacturer and distributor of air filtration products and now operates eight manufacturing sites and several distribution centers across North America. Rensa offers a wide range of standard and customized HVAC filtration products that provide best-in-class filtration performance and energy savings in education, healthcare and high-tech manufacturing facilities. Rensa also offers specialized air filtration solutions for data centers and activated carbon filters for removal of odors and molecular contamination in museums, airports, and healthcare facilities.
